Product Description

Stone Rotary Ball Mill Basalt Granite Clay Grinding Machine For Gold Concentrate Machinery

Product Description

The ball mill is a horizontal rotating device transmitted by the outer gear. The materials are transferred to the grinding chamber through the quill shaft uniformly. There are ladder liner and ripple liner and different specifications of steel balls in the chamber. The centrifugal force caused by rotation of barrel brings the steel balls to a certain height and impact and grind the materials. The ground materials are discharged through the discharging board thus the grinding process is finished.

Features of Ball Mill

- 01 The jack-up device is easy to maintain;
- 02 The hydrostatic and hydrodynamic bearings ensure the smooth operation;
- 03 Low speed transmission is easy for starting and maintenance;
- 04 The oil-mist lubrication device guarantees reliable performance of bearings;
- 05 The gas clutch adopts the flexible start-up model;
- 06 According to the customer demand, manganese steel liner and wear-resistant rubber liner can be customized for Xinhai ball mill with good wear resistance, long service life, easy maintenance.
