Product Description

Impact Mill Rock Crushing Used Impact Crusher Second Equipment 50-120 Ton Per Hour Capacity

Product Description

Impact Crusher can crush the large, medium and small size materials (granite, limestone, concrete ,etc.)With max feed size less than 500mm and compression strength less than 350Mpa. Presently, by practices, its comprehensive function is superior to the cone crusher and the hammer crusher.

Application of Impact Crusher

It is widely used in metallurgy, mine, cement, chemical engineering, fire resistant materials, ceramics and other industrial sectors, as well as in the expressway construction, water conservancy project, building crushed stone, and machine-made sand process fields, etc.

Working Principle

Impact crusher is a kind of stone crusher using impact energy. After turn on,the motor drives the rotor rotate at a high speed .When the material get into the blow bar working area,they will be stroke by the blow bar and thrown to the impact devices around the rotor.The material will come out from the discharge hole until they are crushed to the required size. The clearance between the impact rack and the rotor can adjust the size and shape of the end product.
