Product Description

Impact Mill Rock Crushing Used Impact Crusher Second Equipment 50-120 Ton Per Hour Capacity

Product Description

Impact crusher machine is widely applied in mining, transportation, energy, construction and chemical industry. Impact crushers are ideal choice for crushing and screening. This impact crusher machine features reasonable structure, high productivity, easy operation and maintenance and safe performance. The most outstanding advantage of the impact crusher is that its finished powder is in good, cubic shape and without tensility and cranny.

Features of Impact Crusher

- 1> High reduction ratio and crushing efficiency;
- 2> No-board connection; the blow bar with high chrome (high chromed blow bar).
- 3> Impact plate with a special shape.
- 4> Crushed product with cubical shape.
- 5> Easy maintenance and reliable operation

Working Principle

Stone crusher machine crushes materials with impact force. When the materials enter the blow bar area, they are crushed due to the high-speed impact of the blow bar and are thrown to the impact plates on the rotor for secondary crush. Then the materials will be shot back to the blow bar again for the third crush. This process repeats until the materials are crushed to the required size and discharged from the lower part of the machine. The size and shape of the finished powder can be changed by adjusting the gap between the impact rack and rotor support. The impact crusher machine employs self-weight security device in its back frame. When other objects enter the impact cavity, they will be forced out of the machine by the impact rack in the front and back of the machine.
