Product Description

Impact crushing machine, a kind of new type high efficiency crusher machine, is generally used in the secondary crushing and can be widely applied to the industries of highway, railway, mining and metallurgy. It can be used in crushing of raw materials whose comprehensive strength is no more than 320 Mpa, such as limestone, granite, gypsum, etc.

Features of Impact Crusher

1. Uniformly broken multi-cavity, improving production capacity and saving energy;
2. High chromium new type wear-resistant blow bar, unique toothed impact plate;
3. Shape optimizing function makes the final product cubic;
4. New Design of low speed and multiple crushing cavities sets the rotary speed down by 20-25% and obtain high production capacity; under lower energy consumption.

Working Principle

After the material enters the blowing rod area, it is crushed due to the high-speed impact of the blowing rod, and is thrown to the impact plate on the rotor for secondary crushing. The material will then be shot back into the blow rod again for a third crushing. This process is repeated until the material is crushed to the desired size and discharged from the lower part of the machine. By adjusting the gap between the impact frame and the rotor support, the size and shape of the finished powder can be changed.
