## Spare Parts

The main spare parts of fine sand crusher is rotor and hammer, which are the wear spare parts, need to be changed regularly. The fine sand crusher hammer is made of high chrome alloy, whose hardness is 62 to 65 HRC, can last longer 2 or three times than common hammer.

## Working Principle

Fine impact crusher is a kind of impact rotor crusher with ring hammer. After entering the crusher, the material is first crushed by high speed ring hammer. At the same time, the crushed material obtains kinetic energy from the ring hammer and rushes to the crushing plate at a high speed. After secondary crushing, it falls on the screen plate. The material is further broken through the interaction of the ring hammer, such as cutting, pressing and grinding, and then discharged from the screen plate.
