## Product Description

### High Efficiency Fine Crusher With Horizontal Shaft Barite Quartz Coal 100-250tph Capacity Crushing Plant

## Product Description

Secondary or tertiary crusher, medium crusher, fine crusher. High efficiency fine crusher mainly used for fine crushing of rocks, sand making, also for crushing raw material, clinker in cement factory, etc. The high efficiency fine crusher integrates the advantages of hammer crusher, impact crusher, etc. and is further improved in terms of structure, materials, etc.

## Advantages of Impact Crusher

1. Compact structure, easy maintenance and changing parts. Unique feeding inlet design, keep fine crushing working more safer and reliable.
2. Advanced rotor assemble combined with high chrome alloy steel hammers, large production capacity, hammer head long service lifetime. Hammer impacting working principle makes the output size particles shapes more cubic, less pins and needles, suitable for high standard building material.
3. Suitable for sand making, <5mm once yield occupy more than 85%. Meanwhile only one motor power saving 50-70%
4. Bottom grids design can control output products size efficiently. Grids gap can be customized depend on requirement.

## Spare Parts

The main spare parts of fine sand crusher are rotor and hammer, which belong to wearing parts and need to be replaced regularly. The hammer of fine sand crusher is made of high chromium alloy, the hardness is 62 ~ 65Hrc, and the life of the hammer is 2 ~ 3 times longer than that of the ordinary hammer.

## Working Principle

PXJ High-Efficiency Fine Impact Crusher at run time, the material into the cavity, in the hammer and counterattack plate between the role of the initial break. After the initial broken material falls below the rejection of the material plate, was high-speed counterattack counter to counter, broken, grinding. In the material after a number of composite crushing, erosion and grinding to achieve ultra-fine effect.
