Spare Parts

The main spare parts of fine sand crusher are rotor and hammer, which belong to wearing parts and need to be replaced regularly. The hammer of fine sand crusher is made of high chromium alloy, the hardness is 62 ~ 65Hrc, and the life of the hammer is 2 ~ 3 times longer than that of the ordinary hammer.

Working Principle

The materials are crushed via impact energy produced in the impact crusher. When the materials enter the zone of the board hammer, they are flung into the impact equipments via the high-speed impact of the board hammer. These materials will be re-crushed after rebounding into the scale board. The large materials are crushed into small pieces until it becomes the specified granularities. The end products come out from the base of the impact crusher.
