Spare Parts

The main spare parts of fine sand crusher is rotor and hammer, which are the wear spare parts, need to be changed regularly. The fine sand crusher hammer is made of high chrome alloy, whose hardness is 62 to 65 HRC, can last longer 2 or three times than common hammer.

Working Principle

The optimized crushing chamber improves fine crushing effects and enhances the unitarily of spare parts. The hammer is designed with tungsten and titanium alloy integrated structure and other special wear-resistant materials which greatly lengthen the service life of hammerhead. It is a high-tech product for which we have full intellectual property rights. DSMAC owns the technology, in terms of clinker crushing in particular, which is way ahead of our fellow competitors.
