Product Description

Wet pan mill used in the small and medium size concentrate factory. It is widely applied to the grinding and beneficiation of all kinds of metal minerals, non-metal minerals, rare metal and other materials. Such as gold, silver, lead, zinc, molybdenum, iron, copper, antimony, tungsten, tin and so on.

Working Principle

When it works, the motor drives the speed reducer. Driven by the reducer, the vertical shaft drives the horizontal shaft above, and then the pull rod at both ends of the horizontal shaft drives the roller to rotate in the horizontal direction, and the roller plate is fixed. Add a certain proportion of ore materials and mercury, in the mill is subjected to extrusion pressure from the roller's own weight, the roller rotation and the huge friction generated by the roller plate, after repeated extrusion, kneading, grinding, is completely crushed.
