High efficiency good quality Hammer crusher mill for sand making and aggregates

Product Description

Hammer crusher is suitable for crushing medium-hard materials such as limestone, coke, coal, etc. in cement, chemical, energy, metallurgy and other industrial sectors. It has the advantages of simple structure, high grinding rate, high production efficiency, etc., and can grind under dry and wet conditions. Hammer crusher can adjust the grate strip gap according to user requirements and change the material particle size, so it can meet the different needs of different users.

working principle

In the hammer crusher mill machine, the motor drives the rotor to rotate at a high speed through the belt, and on the rotor there are series of hammers. When the material get into the working area of hammers, the rotating hammers with high rotation speed are crushing the material, the crushed product meeting the required size can be discharged by the outlet and become the final products, the large size product are brought back to the crushing area by the hammers for being re-crushed until they reached the required size.
